AP Psychology - Unit 2 Assignment Biological Psychology

<u>Big Question</u>: Is our brain and our mind the same thing? How does the brain function to create the "human experience?"

Biological Psychology Objectives:

- Describe the structure and types of neurons and explain how neural impulses are generated.
- Describe how nerve cells communicate and discuss the impact of neurotransmitters and drugs on human behavior.
- Identify the major divisions of the nervous system.
- Identify the methods used to study the brain.
- Describe the overall organization of the brain.
- Describe the functions served by the various structures within the brainstem.
- Describe the structure and functions of the limbic systems and explain the relationship between the hypothalamus and the endocrine system.
- Describe the structure and functions of the cerebral cortex and discuss how damage to different cortical areas can impair language functioning.
- Discuss the capacity of the brain to reorganize following injury or illness.
- Describe research on the split brain and discuss what it reveals regarding normal brain functioning.

Biological Psychology Overview

Neuroscience is concerned with the functions of the brain, its component neural systems, and their genetic blueprints, which provide the basis for all human behavior. Under the direction of the brain, the nervous and endocrine systems coordinate a variety of voluntary and involuntary behaviors and serve as the body's mechanisms for communication with the external environment.

The brain consists of the brainstem, the limbic system, and the cerebral cortex. Knowledge of the workings of the brain has increased with recent advances in neuroscientific methods. Studies of split-brain patients have also given researchers a great deal of information about the specialized functions of the brain's right and left hemispheres.

The chapter concludes with a discussion of how psychologists use evolutionary principles to answer universal questions about human behavior and specific questions about individual differences.

Many students find the technical material in this chapter difficult to master. Not only are there many terms for you to remember, but you must also know the organization and function of the various divisions of the nervous system. Learning this material will require a great deal of rehearsal. Working the chapter review several times, drawing and labeling brain diagrams, and mentally reciting terms are all useful techniques for rehearsing this type of material.

Unit 2 Reading Assignment(s)

You are responsible for the reading listed below; it is meant to supplement the material discussed in class and there may be a pop quiz at any point.

• **OpenStax Psychology Textbook:** Chapter 3 (Posted on Class Website)

Unit 2 Vocabulary Terms & Flip Book

Psychology is a term heavy course; you are responsible for the terms below. You will have a vocabulary quiz every other unit. For the quiz I will pull terms from the Unit vocabulary lists.

Unit 2 Flip Book: Each term should be on its own card. Each card will have the term <u>thoroughly and clearly</u> defined on the back. Each card will be taped into a manila folder and turned in the day of the unit test.

1. Biological Psychology	28. Medulla
2. Neuron	29. Reticular Formation
3. Sensory Neurons	30. Thalamus
4. Motor Neurons	31. Cerebellum
5. Interneurons	32. Limbic System
6. Dendrite	33. Amygdala
7. Axon	34. Hypothalamus
8. Myelin Sheath	35. Cerebral Cortex
9. Action Potential	36. Glial Cells (Glia)
10. Threshold	37. Frontal Lobes
11. Synapse	38. Parietal Lobes
12. Neurotransmitters	39. Occipital Lobes
13. Endorphins	40. Temporal Lobes
14. Nervous System	41. Motor Cortex
15. Central Nervous System (CNS)	42. Sensory Cortex
16. Peripheral Nervous System (PNS)	43. Association Areas
17. Somatic Nervous System	44. Aphasia
18. Autonomic Nervous System	45. Broca's Area
19. Sympathetic Nervous System	46. Wernicke's Area
20. Parasympathetic Nervous System	47. Plasticity
21. Reflex	48. Corpus Callosum
22. Endocrine System	49. Split Brain
23. Hormones	50. Consciousness
24. Adrenal Glands	51. Agonist
25. Pituitary Gland	52. Antagonist
26. Lesion	53. Hippocampus
27. Brainstem
